## **DETAILED ACTION**

### ***Election/Restrictions***

Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claim(s) 1-4, drawn to a thermostable enzyme comprising 3' exonuclease activity but essentially no DNA polymerase activity.

Group II, claim(s) 5-7, drawn to a composition comprising a first thermostable enzyme with 3' exonuclease activity but essentially no DNA polymerase activity, and a second enzyme exhibiting DNA polymerase activity.

Group III, claim(s) 8-16, drawn to a method of amplifying DNA using the composition of Group II.

Group IV, claim(s) 17, drawn to a method for amplifying DNA with thermostable enzyme exhibiting 3' exonuclease activity, in which the enzyme is not or to a negligible extent, active on single stranded DNA.

The inventions listed as Groups I-IV do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons: The special technical feature of the instant application is determined to be an enzyme which exhibit exonuclease-activity which do not have a polymerase activity. All of the invention are determined as being linked by this special

Art Unit: 1637

technical feature. However, Davis et al. (US Patent No. 5,391,480, issued February 21, 1995) and Fuller (WO 94/23066, published October 13, 1994) disclose an enzyme which has an exonuclease activity but lacking a polymerase activity (column 3, lines 55-65, Davis et al.) (claim 1, Fuller).

Annex B (part I (C)(ii) provides that if an independent claim does not avoid the prior art, then the question whether there is still an inventive link between all the claims dependent on that claim needs to be carefully considered and that if there is no link remaining, an objection of lack of unity may be raised.

Accordingly, since the linking special technical feature of the instant application does not avoid the prior art, the inventions listed above are determined to lack unity of invention.

A telephone call was not made to request an oral election to the above restriction requirement due to the complex nature of the requirement (MPEP § 812.01).

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
